2018

CBSE , English
Grade - 50-54.9%

Projects

Student-Result-Management-System
3 Months

Code Editors: Such as Visual Studio Code, Sublime .
Browser Developer Tools: For debugging and testing your website.

- Responsive Design Techniques:

Use of Flexbox or CSS Grid for layout management.
Media queries for adapting the website to different screen sizes.

A simple web application through which a student can easily get their result and a teacher(Admin) can easily upload the student's mark details through a form.
First, as a student you have to enter the ERP ID and registration number to get your results and if you are a teacher(Admin) then login with appropriate credentials i.e official admin email address and password and fill up the individual student's mark details and it will automatically stored into the database.

Portfolio
2 Weeks

As a web developer, my portfolio reflects a comprehensive journey through education, skills, services, and work experience. Showcasing my academic background in BCA, it highlights my proficiency in front-end development, UI/UX design. Each project demonstrates my ability to create responsive, user-friendly websites. My services encompass designing visually appealing interfaces, developing functional web applications, and optimizing for search engines, ensuring a holistic approach to web development that caters to both aesthetics and performance.
